

Employee Registration System

Spring Security Implementation

1. Apply Login/Logout facility for the application's users.
 - a. Create login page.
 - b. Create domain model for the user.
2. There will be three types of users with the following capabilities :
 - a. System Administrator
 - i. Can Add/View/Edit/Delete Branches, Departments, and Employees
 - b. Branch Head
 - i. After logging in, the default page must be the branch's view page
 - ii. Should not be able to view the branch listing.
 - iii. Can only edit its own branch details.
 - iv. Can Add/View/Edit/Delete Departments it
 - c. Department Head
 - v. After logging in, the default page must be the department's view page
 - vi. Should not be able to view the departments listing.
 - vii. Can only edit its own department details.
 - viii. Can Add/View/Edit/Delete employees under it

Other Notes

- Add the above functionality from the last exercise
- You will be the one to decide on the domain modeling
- User details must be stored in the database.
- User passwords must not be stored in plain text. (Your choice of hashing algorithm)
- You have 5 working days to finish this task
- Please use your time well at your workplace. Working at home is **discouraged**.
- **Hints :**
 - * Spring Security Documentation
 - * Spring security JSTL tags
